

Packman wall

It doesn't take much imagination to see how we came up with the name Packman. This clip-on acoustic wall ensures you don't get lost in a maze of unnecessary noise, but sinks its teeth into annoying decibels and visual stimuli.

The Packman is easy to attach to a desk or tabletop using clamps. You can immediately see that a lot of attention has been paid to the finish. The corners are rounded, which contributes to a friendly finish.

The Packman is also environmentally friendly: only sustainably certified wood is used in its production.

Specifications
